

## **Forklift Certification Schools Surrey**

Forklift Certification Schools Surrey - In North America, forklift certification is mandatory, making forklift training programs necessary for both the business and their workers working as operators of forklifts. Forklift training focuses on health and safety issues involved in utilizing forklifts. Safety concerns affect both the forklift driver and personnel and other individuals who are in close proximity to the forklift. Businesses may be subject to penalties if they are caught with drivers who are un-certified during a check up. There are a lot of convincing reasons why companies should comply with forklift standards.

Before the employee or trainee is certified to drive a forklift, nearly all provincial, federal and state rules would require the worker undergo an evaluation of the skills necessary for forklift safety. There are several forklift certification schools offering courses for employees and there are also schools that provide on-line forklift training. Then again, employers should be aware that forklift certification training is not "just a test". Proper forklift training should comprise some areas of study, like for example theory and hands-on practice. Rules do not require employers to have an outside organization to certify operators of forklifts.

A quality forklift certification school will include a suggested curriculum which comprises classroom training and hands-on training that is performed on-site. The training sessions within the classroom incorporate videos, power point presentations, discussions and models. Students typically are required to write a test to check for understanding of subject matter. Certificates of completion are issued upon successful completion of the class.

The use of the equipment evaluation needs the trainee to know the job site hazards, pre-operational machine check, operational instruction and a pass/fail operational test.

Training usually consists of the following subject areas: Understanding legislations and regulations; Controls & Instrumentation; Steering and Maneuvering; Engine maintenance and Operation; Visibility, Fork & Attachment Restrictions; Stability, Rated Capacities, Inspection & Maintenance; Refueling; Load Control; Pedestrians, and Hazardous Places & Rough Terrain Operation. Furthermore, there are training courses offered for workers who are transitioning to new job positions.
