Manlift Operator Certification Surrey

Manlift Operator Certification Surrey - We provide a scissor platform and aerial lift training and certification to empower the trainee with the knowledge and general understanding of the efficient and safe operation of "Power Operated Mobile Work Platforms," based on the existing regulations in the industry. Upon successful completion of training, those participating would be able to know and understand particular safety and health related hazards associated with operating scissor and aerial lifts.

There are different affiliated locations within your district providing Manlift Operator Certification Programs. Those training are provided with in-depth instruction about safe operation and rules along with extensive hands-on training. The skill level and knowledge of each and every individual training is assessed and people who can demonstrate an acceptable level of operational competence would receive Operator Certification cards and employee documentation.

Theory Training
The trainer guides trainees through a comprehensive and interactive review during the theory training. The operator course book is studied that covers all applicable rules. Other subject matters such as safe operating measures, different machine types in addition to various associated applications and sizes, general work place safety and pre-use checks are explored individually.

Theory Evaluation
The evaluation of the theory parts starts with a written exam, that focuses on the course concepts that was included in the reference manual. Tests are graded and returned to the one training. Afterward the tests are reviewed to ensure understanding and a minimum score of 70% is needed in order to pass this portion of the training.

Practical Training
The hands-on part of the course is covered in the practical training. Here, trainees are shown the safe operating measures, the shutdown and parking procedures and the pre-use inspection measures. Each trainee has the chance to operate the machine and practice the skills they learned throughout Theory Training under the helpful eye of the program trainer in an environment which is safety controlled.

Practical Evaluation
The Practical Evaluation is where the trainees are assessed to assure they have reached a minimum level of skill. The trainees are then assessed on an individual basis utilizing the equipment in a reasonably difficult course environment. As soon as the assessment is done, the ones training are de-briefed and given the chance to deal with whichever issues they may have about whatever portion of the course. Each employer of a successful trainee would be given the official documents and records immediately after the course has been finished.
