

## Boom Lift Training Surrey

Boom Lift Training Surrey - Elevated work platforms, also known as aerial platforms, allow workers to carry out tasks at heights that will otherwise be inaccessible. There are various types of lifts meant for different site conditions and applications. If carelessly operated, elevated work platforms could lead to serious injury or death. The most common reasons for related accidents are falls, electrocution, tip-overs and crushed body parts. Lift operators must be completely trained in techniques in order to avoid accidents while operating lifts.

The Aerial Lift Safety program offers required resources to help individuals required to learn how to operate these devices more effectively. Through the course, participants would receive thorough instruction. Types of lift covered comprise boom supported, scissor and articulating aerial lifts. The video presents the correct techniques operators must follow. Instruction focuses on protection against falls, pre-operational inspection, stability of the device and safe driving procedures.

The boom lift training program will help to address employee safety and equipment reliability, using materials which are fully compliant with your local and regional regulations and requirements. Course management and training methods will be taught. The trainer will also know the technical aspects of aerial lift safety.

Parts of the Boom Lift Training program include both classroom training and practical training. Both sessions should be successfully finished for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms completely beyond the base of the machinery. The theoretical part of the training is almost identical for both kinds. The practical component of the training can be finished more quickly if just one kind of machine is used.

### Elevating Work Platform Training Program Objectives:

For safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training would help operators make use of their machines more efficiently and will decrease the possibilities of accidents in the workplace. Trainees would review of applicable rules and business policies, talk about Due Diligence, review Criminal Negligence and consequences to trainers, employers, employees and supervisors. Participants will review machine features, stability, operating procedures, charging/fueling procedures and parking. Site-specific safety issues will be dealt with.
